**Born Global: Implications for Higher Education**

Economic Development Association Scotland (2016) Culture, Outlook and Scottish Internationalisation

**Report**

A number of official and independent studies have examined Scotland’s international trade and export performance, with debate and recommendations focusing on issues such as systems of support and finance, infrastructure and connectivity, and diaspora networks. While these are all important, an EDAS-commissioned review of recent research on the topic found that culture and outlook is often seen as a further potential factor impacting Scotland’s performance. There is a perception that a lack of global outlook and intercultural awareness among the Scottish labour force and young people, in conjunction with shortages in sales, marketing and **language skills**, may be negatively affecting internationalisation activity. A 2014 British Council Scotland-commissioned survey of businesses, young people and educational institutions appeared to give support to this view.

PDF with list and weblinks to recent ECML research publications

The results of 14 projects from the *Learning through languages* programme are now available online. A summary of the resources and websites is presented in the online brochure, offering

- a brief description of each resource, including the key target audience;
- the languages in which each resource is available;
- the thematic area on the ECML website where each resource has been located.

The results from each of the projects will also be showcased individually on the ECML website.

Council of Europe (2015) The Language Dimension in all Subjects – A handbook for curriculum development and teacher training

CoE2015_The_Language_Dimension_in_All_Subjects

Mastery of the language of schooling is essential for developing in learners those skills that are necessary for school success and for critical thinking. It is fundamental for participation in democratic societies, for social inclusion and cohesion. This Handbook is a valuable resource for education authorities and practitioners in Council of Europe member states. It will help them to reflect on their policy and practice in language
education, and support them in developing responses to the current challenges of education systems.

For the children of migrants, learning the language of instruction and assessment so that they can enter school or carry on their education is paramount. Education authorities in many parts of the EU are faced with this challenge because of growing levels of mobility. Enabling such children to access teaching and learning quickly is critical to ensuring they can reach their potential and progress to higher education and employment to the same degree as non-migrant children. In the process the children themselves gain linguistic and meta-linguistic skills from learning the language of instruction and assessment in addition to their mother tongue. This research is designed to gather, analyse and synthesise existing data and research on:

- What works to enable migrant children who use a language at home different to the language of school instruction to participate in learning, attain proficiency in the language of instruction, and achieve results (qualifications, progress to higher education, progress to employment) that match their potential; and
- What works to maintain and develop the multilingual skills of migrant children which will enable them to use these competences for cultural and economic purposes.

This edited collection sets out to explore the relationship between sociocultural experience, identity and second language learning among student sojourners abroad.

**Go International and British Council (2015) Student Perspectives on Going International**

The research aims to provide evidence for UK higher education institutions and policy makers who are developing and implementing initiatives to increase the number of UK-domiciled students accessing international opportunities. The findings are based on the responses to an online survey by 1588 UK-domiciled undergraduate students (out of a total of 3010 responses) in 36 institutions and on focus group interviews in eight of these institutions.
Key findings include:

- The majority of students surveyed perceived a relationship between spending time abroad during their studies and their employability, academic success and personal development.
- Students perceive very short mobility periods to result in similar impacts to longer periods of mobility of one semester or a full year.
- The principal motivations to go abroad, whether studying, working or volunteering, were a desire for an enjoyable experience and to enhance employability and career prospects.
- Key factors in the decision to go abroad were the availability of funding, personal safety and security and perceived quality of host and location.
- Services and information offered by institutions such as help completing an application were considered the most valuable in decision making, especially for students from disadvantaged backgrounds.
- While students are motivated by the experiences and opinions of other students when making a decision, the encouragement of academic tutors was a significant factor.

Barriers to mobility cited by students considering a period abroad included:

- fear of isolation,
- insufficient funding
- lack of knowledge of available opportunities
- lack of language skills and
- potential impact on degree length

The publication is a collection of articles written by teacher-researchers at the University of Jyväskylä Language Centre. Part 1 aims at establishing and expanding perspectives on the multilayered and multivoiced reality of pedagogical development in higher education. Part 2 looks at how practices can be enhanced by engaging teachers, students and other cooperating partners in reflection and development. Part 3 focuses on exploring perceptions of language, language learning, and literature. As a whole, the collection represents a spectrum of approaches and shows the various stages of pedagogical thinking and perception. It provides insights into pedagogical development in higher education language teaching through an examination of policies, perceptions, and practices.

The Colloquium was hosted by LCLC to address the future of modern foreign language learning and teaching. Various interested parties including representatives from schools,
universities, government, and language organisations came together to discuss the issues facing modern foreign languages as a subject. The opening keynote speech saw Peter Horrocks, new Vice-Chancellor of The Open University, talking about his experiences of modern foreign languages both at the OU and previously as Director of the BBC World Service. The second keynote of the day was a varied and often humorous speech delivered by Oliver Miles, former British Ambassador to Libya, Luxembourg and Greece, about his life as a serial language-learner. Delegates also heard from Kathryn Board and Teresa Tinsley – authors of the British Council and CfBT’s Language Trends Survey and external evaluators of the LCLC project.
